

Descendants of Elijah Graves of U.S. & Ontario, Canada (Gen. 10)

(Rev. 5 May 2020)

NOTES: This chart shows male lines of descent only, since the focus is on using Y-DNA analysis to trace the Graves surname.
 The number in each bottom colored box is the DNA test ID.
 When two descendants of a common ancestor have exactly the same DNA test results, it is assumed that the common ancestor also had that result, and all boxes up to and including the common ancestor have been given the same color.
 All boxes with the same color have the same DNA test results.
 24 of 25 means that 24 of the 25 DNA markers matched the inferred ancestral haplotype.
 A notation like 13-19 indicates a mutation from the ancestral haplotype, and means marker 13 had a value of 19.
 The ancestral haplotype is not yet known for sure. Both gen. 169 and gen. 168 share a common ancestor with gen. 65, but gen. 169 and most of gen. 168 have 18 for marker 13, while gen. 65 has 19 for that marker. It seems likely that a value of 18 for marker 13 is part of the ancestral haplotype.
